UNIVERSAL 3 SERIES

Rotary Positive Displacement Pumps
Front Loading Seal Design

SPXFLOW®

WILLIAMS
WC
CARVER CO.

A NEW LEVEL OF SANITARY PERFORMANCE.

THE UNIVERSAL 3
SERIES of pumps is
 the latest expression of
 decades of continuing
 product improvements.
 They combine 3-way
 mounting versatility
 introduced by the
 Universal 1 with new
 features that extend pump
 life and improve sanitary
 performance.

Product features and benefits

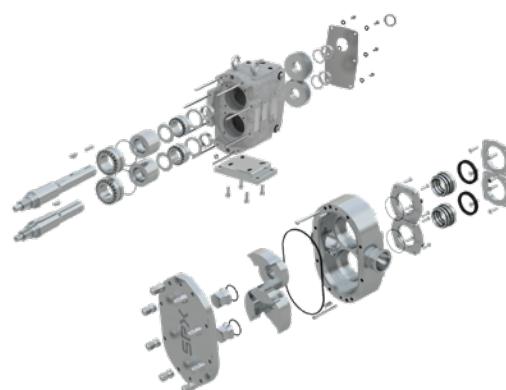

Sanitary Features

- Front loading seal design
- CIP capable standard. Pump rotor has internal flats and will free drain with vertical ports.
- Cover is free draining in horizontal or vertical port positions.
- Rotor/shaft connection is completely sealed from product zone and reduces the risk of corrosion.
- Single mechanical seals standard. Optional double mechanical seals and o-ring seals also available. Ability to switch seal types without additional machining.
- Cover seal is a profile design to improve cleanability and resist particulates from being “pinched” and trapped.
- Stainless steel gear case standard.
- Aseptic and rectangular flange options available.
- Seal flush and steam-in-place optional.

Shown with standard stainless steel gearcase

Shown with standard flat body profile

LONG-LIFE ENGINEERED FEATURES.

TYPICAL APPLICATIONS

NUTRITION & HEALTH

Soups, Stews, Tomato Paste
Vegetables, Dressings
Chocolate, Fats & Oils
Batters, Cream Fillings
Brewery, Wort
Soft/Fruit Drinks

DAIRY PROCESSING

Cream, Milk
Cheese Curd & Whey
Cottage Cheese
Yogurt

PHARMACEUTICAL/COSMETICS

Pill Pastes
Syrups, Extracts, Slurries
Face Creams & Lotions
Hair Styling Gels & Liquids
Dyes & Alcohols

CHEMICAL/INDUSTRIAL

Solvents, Paints
Fuels
Resins, Polymers & Sludges
Oil & Lubricants
Soaps

Long-life Features

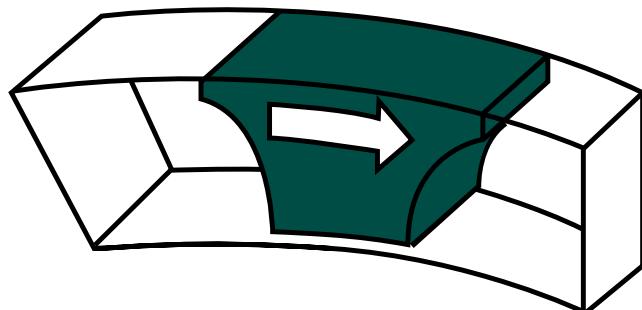

- Up to 500 psi (34.5 bar) pressure capability.
- Pumps rated to 300°F (149°C) as standard.
- Special rotor nut designed for extended service without loosening.
- No bearings in the product zone.
- New 17-4 shafts are shorter and are larger diameter than previous models.
- No bearings in the product zone.
 - Reduces overhung load which improves shaft alignment and decreases seal and bearing wear for extended seal life.
 - Improves shaft strength and stiffness helping to eliminate vibration
- Heavy duty stainless steel bearing frame standard.
- Double tapered roller bearings.
- Greased lubed bearings for positive lubrication to all bearings over entire speed, temperature and pressure range.
- Body retaining screws for maintaining mechanical seal contact during inspection.
- Extended outer seal life. A wave spring, instead of an o-ring, mechanically loads the seal.
- Unique mechanical seal design utilizes 2 pin stationary seal and special design shaft for rotary seal.

Installation Features

- Bidirectional flow. Rotors, locked with torqued nuts, rotate securely in either direction. No more flow direction/shaft position specifications.
- Versatile 3-Way mounting of gear case, including vertical alignment of ports.
- Upper or lower shaft position.
- Non-galling Waukesha "88" alloy rotors standard; permits running at tighter clearances and pumping a wide range of viscosities.
Stainless steel rotors also available.
- 316L stainless steel pump body and cover.
- Electro-polish of product contact surfaces, optional.

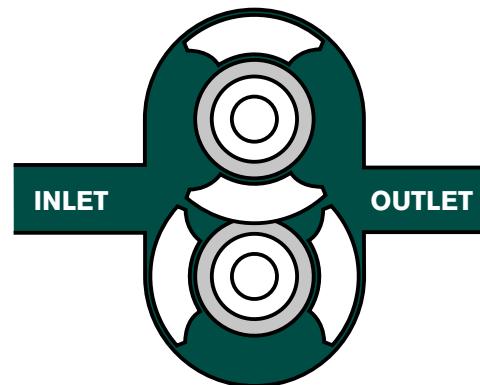

TIME-TESTED ROTARY PUMP; CIRCUMFERENTIAL-PISTON OPERATING PRINCIPLE

In the Waukesha Cherry-Burrell design, arc-shaped “pistons” (rotor wings) travel in annular-shaped cylinders machined in the pump body; the resulting long sealing path reduces slippage and produces a smooth flow of product without destructive pulses or pressure peaks and without valves or complex parts.

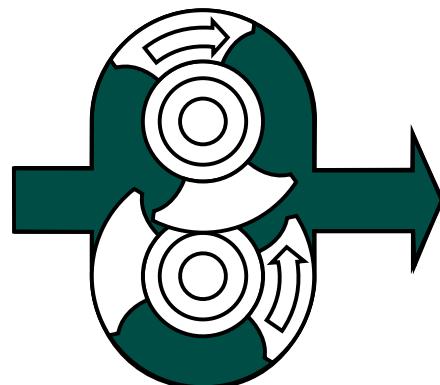

FOR LOW VISCOSITY FLUIDS

Rotors, made of Waukesha “88” alloy, can be run with close clearance to the 316L stainless steel fluid head, without galling or seizing should inadvertent pressure surges cause contact. The close clearances combined with the rotor geometry, which gives a long sealing path between the pump inlet and outlet, means low slip operation. As a result, you achieve: high efficiency, good priming ability, metering capability and good flow control.

FOR HIGH VISCOSITY FLUIDS

The large fluid cavities of the rotors, plus the large easy entry anti-cavitation ports, allow efficient pumping of high viscosity fluids, slurries or even liquids with large chunks or particles.

FOR NON-LUBRICATING AND ABRASIVE FLUIDS

The Waukesha Cherry-Burrell design has no bearing in the fluid being pumped, no sliding or rolling contact and no rotor-to-rotor contact. This produces **MAXIMUM SERVICE LIFE** even under severe operating conditions.

Product Specifications

PERFORMANCE AND LONG LIFE THROUGH DESIGN EXCELLENCE AND QUALITY CONSTRUCTION

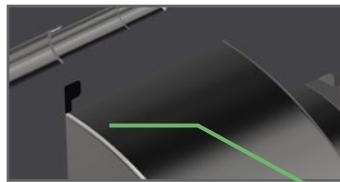

Single Mechanical Seal*
Standard seal configuration: silicon carbide rotary seal face and carbon stationary seal face. Alternate materials available for abrasive service.

Double Concentric Mechanical Seal*
Used with flushing fluid to cool, lubricate, flush away residue. Best arrangement for severe service.

Single and Double O-ring Seal
Traditional general purpose seal. Low cost and easy to service. Suitable for low pressure applications. 100 psi, 7 bar

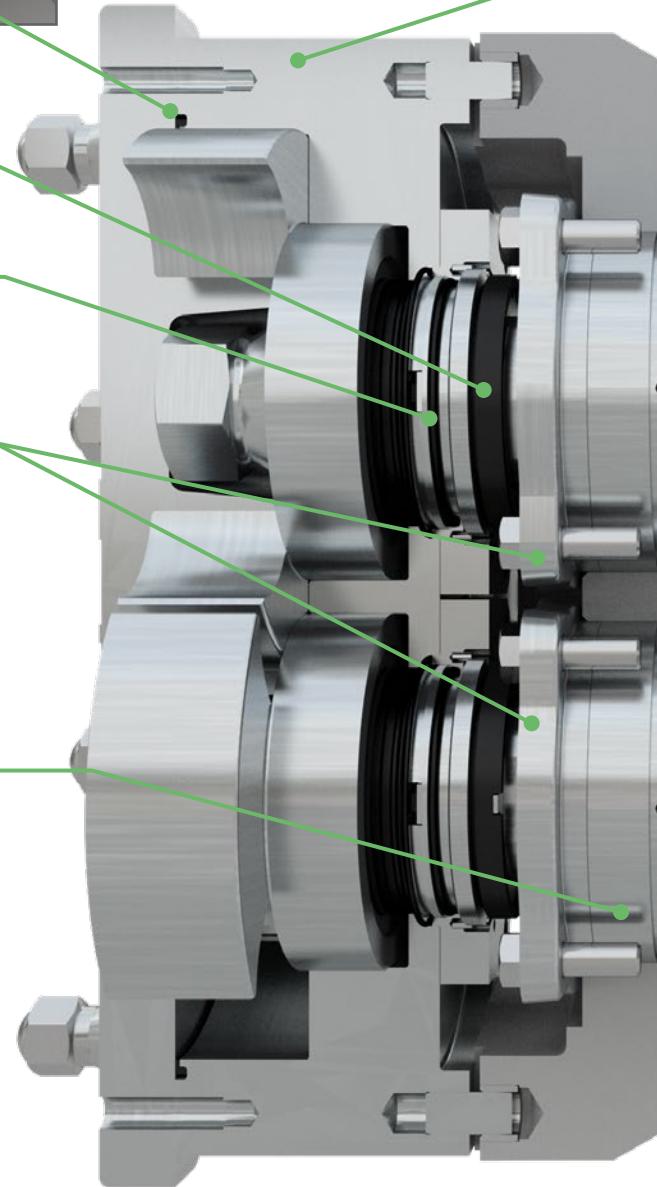

Designed with an L-Shaped cover gasket which is easy to clean and prevents particulates from lodging under the gasket.

Field interchangeable seal options
▪ Seals located within the pump rotor and body

Standard stainless steel bearing retainers

Front bearing fixed; rear bearing floating. Better control of thermal expansion when handling hot products

The Waukesha Cherry-Burrell Universal 3 Series gives you...

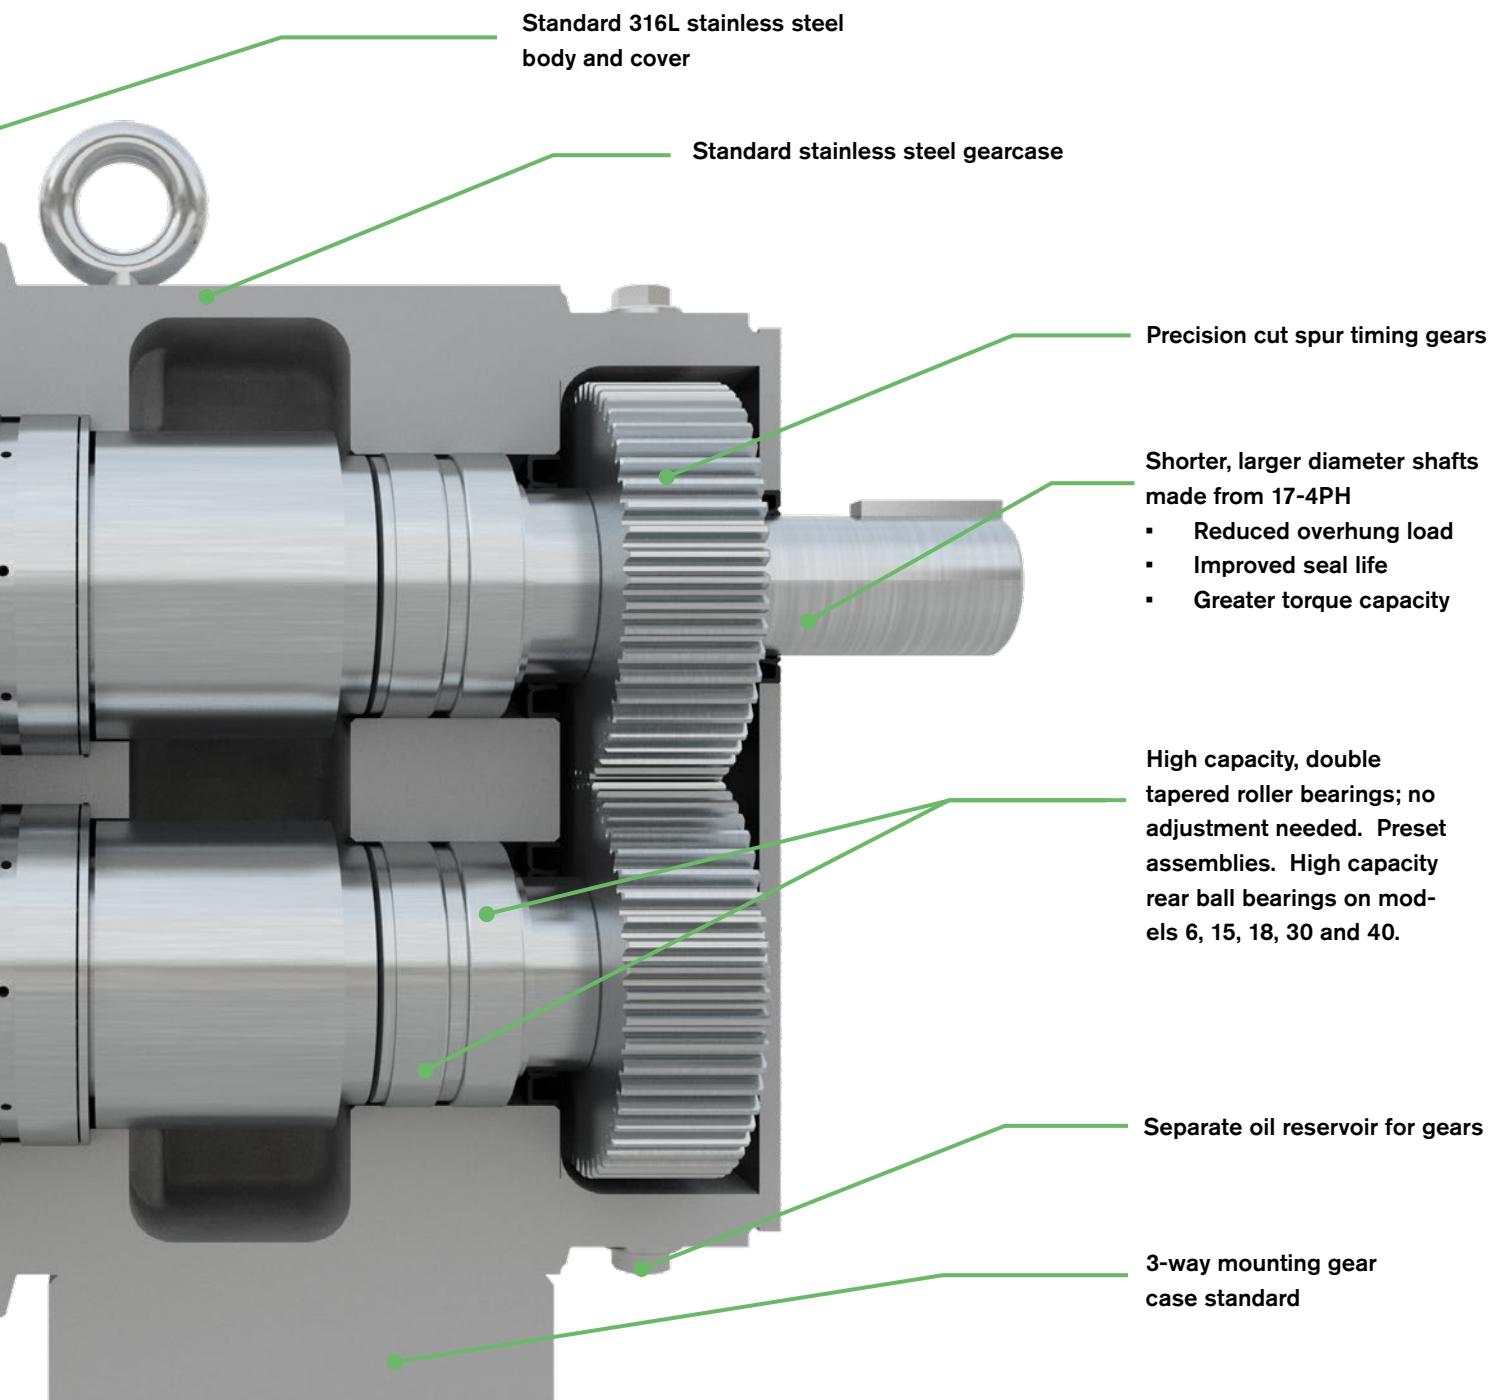

High pressure capability, up to 500 psi/34.5 bar, for more demanding jobs.

Longer service life, resulting from a fresh engineering approach and durable high quality components.

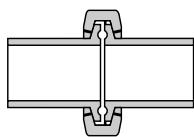

The right seal, for countless applications, plus interchangeability when needed

Metal rotor: Waukesha "88" non-galling alloy, for close running clearance.

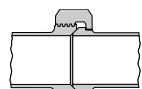

Design conforms, to 3-A, EHEDG

Standard & Options

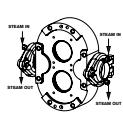

Clamp Connections

Bevel Seat

DIN, SMS, RJT

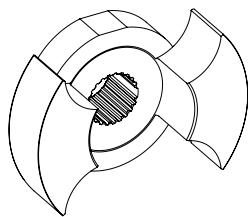

Aseptic

Ports

Standard: Sanitary clamp type connections. Available in a variety of styles including S-Line, I-Line and Q-Line.

Options: Bevel Seat, European Types; DIN, SMS, RJT, Aseptic Ports

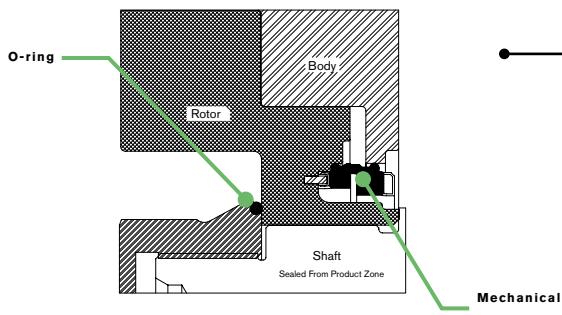

Rotors

Standard: Twin Wing suitable for most applications.

Rotor Clearance

- Standard for most applications up to 300°F (149°C)
- Low viscosity clearance rotors optional for applications up to 200°F (93°C)
- Contact application engineering for other rotor clearance options

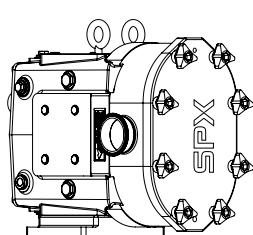

Cover & Gearcase

Standard: Stainless steel 17-4 shafts, top shaft position, stainless steel bearing retainers, shaft completely sealed from product zone.

Options:

- Lower shaft position
- Bearing isolators
- Pedestal shims for side mounted pumps. Left hand shaft position is standard
- Right hand shaft is positioned on side mounted gearcase

Shown with optional 3-wing cover nuts

O-rings

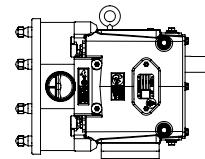

Standard: Fluoroelastomer FKM

Options: Fluoroelastomer (FKM), EPDM, Fluoroelastomer (FFKM)

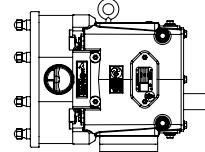

Shaft Position

Standard: Top Shaft Position

Option: Lower Shaft Position

Top Shaft Position

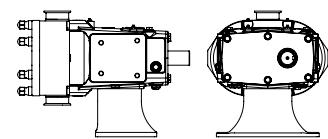

Lower Shaft Position

Mounting

Standard: Flat plate, epoxy painted, with adjustable feet, SS coupling guard, and Lovejoy or Woods coupling.

Options:

- 304 SS unpolished plate base with adjustable feet
- Portable base with rubber wheels
- SS tubular bases

Optional Side Mount Gear Case for vertical fluid entry and free draining of body

Standard left hand shaft position shown (right hand optional)

Bases & Drives

Standard: Stainless steel tubular base with adjustable feet and stainless steel guard and coupling.

Options:

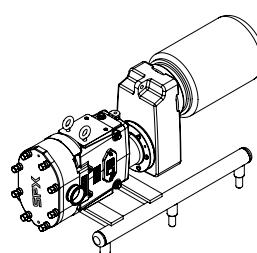

- 304 SS plate
- Flat epoxy plate
- Portable base

Tru-Fit®

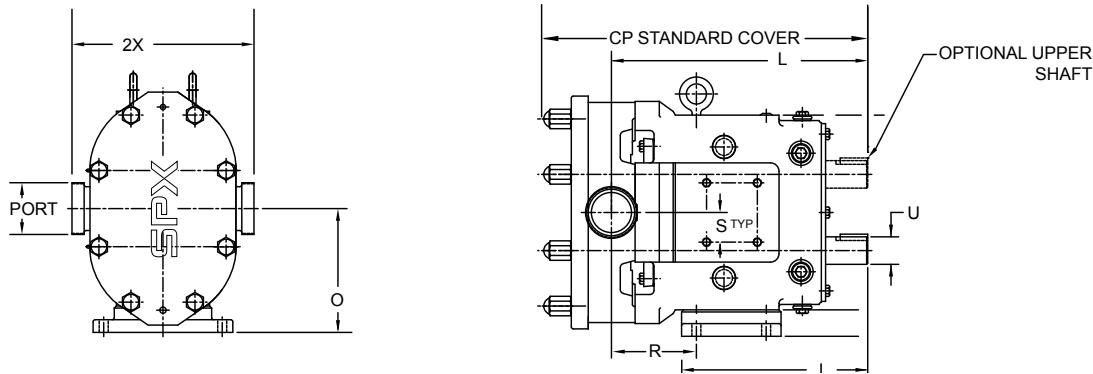

Standard: Close coupled Tru-Fit® pump mounted on stainless steel base with stainless steel adapters.

Options:

- 304 SS polished plate base
- NEMA or IEC frames available. Right angle reducer also available for additional space savings
- 1/2 through 60 horsepower drive options available
- Horizontal or vertical porting
